Hot Stone Massage

The pre-warmed stones are placed on key points of the body to stimulate the circulatory system, and warm, soften and relax tight, aching muscles while promoting an extraordinary feeling of relaxation and contentment. Rocks made of smooth volcanic Basalt are used because of their high iron content and ability to retain heat. A number of specific therapeutic benefits are attributed to the skilful application and usage of hot stones benefiting health conditions such as deep muscular aches and pains, stress, circulatory problems, arthritis, fibromyalgia, sleep problems and others.
